

Protect the environment – water pollution

Water pollution is bad for the sea animals. It is also bad for us. Therefore we need to protect the Ocean.

- People throw away so much rubbish into the sea. Therefore some sea animals will eat the rubbish and become ill or even die. So that, we should stop throwing the rubbish into the sea.
- The ships and the factories produce so much toxic waste. It is poison. Some sea animals will become extinct unless people stop producing the toxic waste into the sea.
- People did not have place to live so they want to turn sea into land. However it is a selfish behavior. The sea animal will no place to live and the mud will pollute the water. Therefore people should stop turning sea into land.

We need to remember 3R!
